

K12 Signature Building

User Guide - Version 6.1.3

Created by James Thom. Designed for K-12 school districts.

K12 Signature Building is a configurable email signature generator. District administrators customize district settings once, then export a standalone Staff Generator that employees can use to create district-approved email signatures.

What is included

- K12_Signature_Building_Builder.html - the administrator builder and staff generator exporter
- docs/K12_Signature_Building_User_Guide.pdf - this guide
- config/sample-district-config.json - example configuration
- CHANGELOG.md - version history
- LICENSE.txt - license information

Basic administrator workflow

1. Open the Builder HTML file in a modern browser.
2. Configure district information, colors, logos, buildings, notices, and generator options.
3. Upload logos when possible so they are embedded and portable.
4. Use Download Staff Generator to create the staff-facing file.
5. Share the exported Staff Generator with employees.

Administrator Setup

Use the District Administrator tab to configure the tool. Settings are saved locally in the browser and can also be exported to a JSON configuration file.

Area	Purpose
District	District name, tagline, email domain, and website.
Branding	Primary, accent, and header colors. Hex codes are supported. WCAG/ADA auto-adjust can improve text con
Logo Library	Upload or link up to three logos. Uploaded logos are embedded for portable staff exports and PNG rendering
Buildings	Add, edit, or remove building/department names, phone numbers, and optional fax numbers.
Legal & Accessibility	Control Public Records, Confidentiality, Accessibility, and PNG options. Notices may be locked by the admini
Export	Download the Staff Generator, Admin Version, or Configuration JSON.

Logo guidance

Uploading logo files is recommended. Uploaded files are embedded as Base64 images, which helps the exported Staff Generator work offline and helps PNG download include the logo. Hosted URL logos may display in the browser but can be blocked during PNG export by browser cross-origin security rules.

Always provide Logo Alt Text, such as "Example School District logo," so screen readers have a meaningful description.

Staff Generator Layout

The staff-facing generator is organized into four sections.

Box	Fields
1. Personal Information	Full Name, Job Title, Email Username, Email Address, Room / Office
2. Building & Contact	Building / Department, Custom Building when needed, Phone Number, Extension, Mobile Phone, Fax
3. Website & Scheduling	Link Display Label, Custom Label, Website / URL, Link Icon, Include QR Code
4. Message, Logo & Options	Bottom Message, Signature Style, District Logo

Copying signatures

- Copy Signature creates an HTML signature for email clients.
- Copy Plain Text provides a fallback text-only version.
- Download HTML saves the generated signature markup.
- Download PNG creates an image version when enabled, but HTML signatures are recommended for accessibility.

Accessibility note

For routine email, use Copy Signature. Image-only signatures cannot be fully interpreted by assistive technologies and may not meet ADA, Section 508, or WCAG accessibility expectations.

Adding the Signature to Gmail

1. Create your signature in the Staff Generator.
2. Click Copy Signature.
3. Open Gmail and choose Settings, then See all settings.
4. Scroll to Signature and create or select a signature.
5. Paste using Ctrl+V or Cmd+V.
6. Scroll down and click Save Changes.

Adding the Signature to Outlook Web / Microsoft 365

1. Create your signature in the Staff Generator.
2. Click Copy Signature.
3. Open Outlook on the web.
4. Select Settings, then Account, then Signatures.
5. Create or edit a signature and paste using Ctrl+V.
6. Click Save.

Recommended release process

- Keep the Builder file for district IT staff.
- Distribute only the exported Staff Generator to employees.
- When settings change, export a new Staff Generator and replace the old copy.
- Keep a backup copy of the Configuration JSON.
